

Resources: Using Redmine

Courtney K Hoff, Data Support Specialist

2024 CDCB Genomic Nominators and Laboratories Workshop

Tuesday, July 30th 2024

CDCB's Redmine Portal

- An integrated documentation portal where collaborators can ask questions, report issues, and find documentation
- Essentially, CDCB's customer service hub

CDCB integrated documentation system

Home

COUNCIL ON DAIRY CATTLE BREEDING

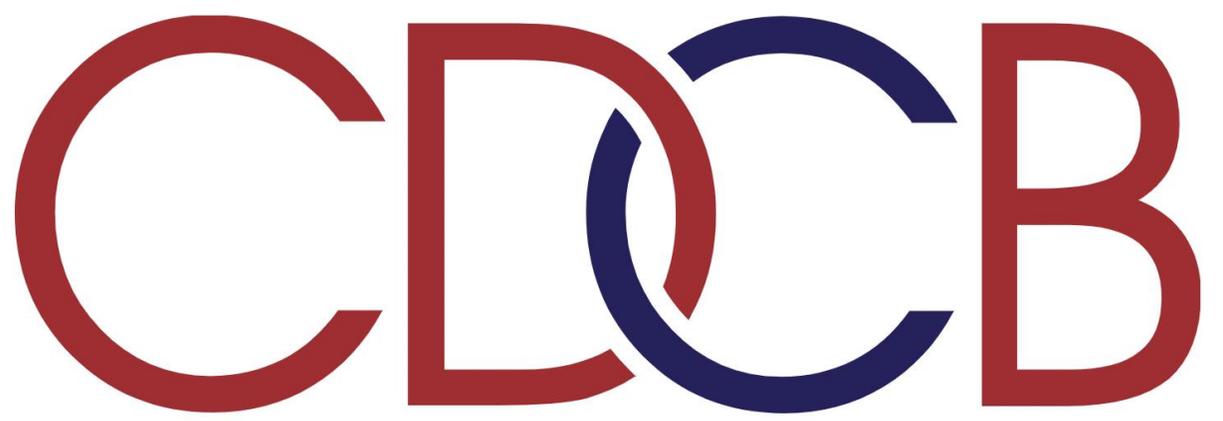

This is the CDCB integrated documentation system, that interacts with [CDCB website](#)

Registered users should sign in ("Sign in" button on the upper right corner of the screen). If you are a nominator and do not have a username and password, please contact CDCB staff.

For unregistered users (no password required): <https://redmine.uscdcb.com/projects/cdcb-customer-service/wiki> [access to "CDCB Nominator project" documentation]

To create tickets, access monthly report cards, and see other project documentation, you must have an account

Creating a Redmine Account

- If you are a new collaborator, Redmine accounts will be created as you go through the Certification Process
- To request new accounts if your organization is already a collaborator, a current account holder must submit a request via Redmine

Creating a Redmine Account

Important! WebConnect accounts and Redmine accounts are not the same. Both operate separately and the accounts are not linked.

Creating a Redmine Account

- Information required:
 - Account holder name
 - Organization
 - Valid email address

Valid email address =

1. Not previously used for a different Redmine account
2. Up to date, if your company changes email addresses please let us know!

Creating a Redmine Account

- With collaborator account access you will be able to access the Issues tab of the Collaborator Portal
- You will also be able to access an additional sub-project:

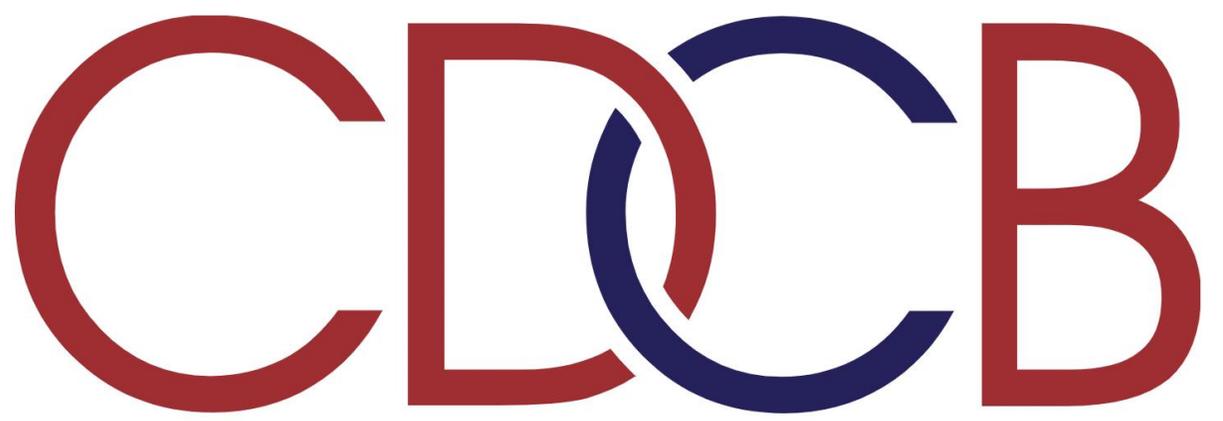

CDCB collaborator portal 👤
| Nominators_and_labs_comms 👤

Subproject where monthly report cards can be accessed

Reporting Issues via Email

- Must send the email from an email with a registered CDCB Redmine account
- Recipient of the email redmine@redmine.uscdcb.com
- CC'd contacts will be “Watchers” if they also have CDCB Redmine account
- Subject of the email = Subject of the ticket
- Body of the email = Description in the ticket

Reporting Issues via Email: Example

To CDCB Redmine from an email with a registered account

To: redmine@redmine.uscdcb.com

Subject: This is a test

From: Ezequiel Nicolazzi - ezequiel.nicolazzi@uscdcb.com

Message Size: 28 KB

COMMONLY USED CODES

- Genomic fee code
- Parentage indicator code
- Multiple birth code
- Record type code
- Source code
- Herd code difference reason code (HRC)
- Genomic usability code
- Genomic error codes
- Pedigree and phenotypic error codes

Explanations of Codes in Format 1 and error codes

PROCEDURES

- Adding MGS and MGGS
- Corrections to nominations
- Corrections to pedigree (Format 1 / Format 4)
- Corrections to pedigree to resolve genomic conflicts
- Corrections to production (Format 4 - **DRPC ONLY**)
- Create a format1G
- Dealing with clone records
- Embryo and live animal merging process
- Nominate as parentage verification only
- Request for Large Transfer of Genotypes (Selling Genotypes)
- Sex and Fee code conflict
- Sharing genomic results with other active nominators

Explanations to pedigree/genomic error fixes and other complex procedures

FORMATS

- **Pedigree, production, & reproduction data**
 - Format 1 (Pedigree data)
 - Format 1E (Pedigree data - Error records)
 - Format 4 (Lactation data)
 - Format 4E (Lactation data - Error records)
 - Format 5 (Reproductive data)
 - Format 5E (Reproductive data - Error records)
 - Format 6 (Health data)
 - Format 6E (Health data - Error records)
 - CES (Calving Ease Scores)
 - PVR (Parentage Verification Record)
- **Genetic evaluations**
 - Format 38 (Bull/Buck genetic evaluation data - production)
 - Format 40 (Bull genetic evaluation data - type traits)

- **Genetic evaluations**
 - Format 38 (Bull/Buck genetic evaluation data - production)
 - Format 40 (Bull genetic evaluation data - type traits)

Corrections to pedigree - PUBLIC

Table of contents

- Corrections to pedigree - PUBLIC
- General information
 - What to do in case many fields in animal pedigree are incorrect
 - How to create cross-references
 - How to manage partially known or unknown ID during submission
- Correction information
 - Correct the breed code
 - Correct the gender
 - Correct the country code
 - Correct animal ID (ReID)
 - Correct/add registered animal name
 - Correct one parent (add, change or "blank")
 - Correct the birth date**
 - Switch parentage between two animals (sire and dam)
 - Change the preferred ID
 - Correct a wrong parent when the correct parent is unknown
 - Correct the multi birth code
- Deletion information
 - Delete a pedigree
 - Delete a record with no pedigree information:
 - Delete a cross-reference
 - Delete a Constructed Dam (and prevent it from being re-created)

Select "Correct the birth date" in the table of contents on the "Corrections to pedigree" page

General information

What to do in case many fields in animal pedigree are incorrect

- **Example cause:** Pedigree information is wrong in more than 2 fields for one individual. The record may have the wrong animal ID.
- **Correction:** Too many changes in a single [Format 1](#) record will not be accepted to guard against the record having the wrong animal ID. If more than 2 changes in pedigree are required for a single individual, please submit multiple records for the same individual, each containing not more than two record changes. Although CDCB accepts more than two pedigree changes contemporarily, the algorithm that checks the integrity of the data may exclude the record if too many inconsistencies are reported. A correction code may be required for some change to be accepted.

How to create cross-references

Correct the birth date

- **Correction:** Create a [Format 1](#) record, following these instructions
 - set birth to correct birth
 - set pedigree verification code (@89) to 2
 - If the change is over 5 years multiple records will be needed so each record changes the birth date by less than 5 years. Only a breed source record can change a breed source pedigree. If the existing record is for an animal with lactations or progeny and the input record is not breed source, the birth date change can not be more than 90 days (400 days with verification). If the existing birth date is estimated and the input record is not breed source, the maximum change is 21 mo (638 days).

Switch parentage between two animals (sire and dam)

- **Correction:** Create and submit three (3) [Format 1](#) records, following these instructions in the exact order
 1. create a pedigree correction record for animal #1 with the correct Sire ID and the Dam ID set to blanks, set record type code (@88) to P and verification code (@89) to 1
 2. create a pedigree correction record for animal #2 with the correct Sire and Dam IDs, set record type code (@88) to P and verification code (@89) to 1
 3. create a pedigree correction record for animal #1 with the correct Dam ID, set record type code (@88) to P and verification code (@89) to 1

Change the preferred ID

- **Correction:** Create and submit [Format 1](#) records, following these instructions.
 - **Cows**
 - set animal ID (@3) to preferred ID
 - if the correct preferred ID is NOT in the database, set cross reference ID (@54) to previously preferred ID
 - **Bulls**
 1. remove previously preferred ID:
 - set animal ID (@3) to preferred ID
 - set cross reference ID (@54) to previously preferred ID
 - set record type code (@88) to Y
 2. re-add previously preferred ID, but not as the preferred ID:
 - set animal ID (@3) to new preferred ID from step 1 above
 - set cross reference ID (@54) to deleted ID from step 1 above
 - set record type code (@88) to P
 3. re-add bull name and/or registry status to non-preferred ID:
 - set animal ID (@3) to animal ID removed in step 1 above
 - set record type code (@88) to P

Correct a wrong parent when the correct parent is unknown

- **Correction:** Create and submit [Format 1](#) records, following these instructions.

Corrections to pedigree - PUBLIC

Table of contents

Corrections to pedigree - PUBLIC

General information

- What to do in case many fields in animal pedigree are incorrect
- How to create cross-references
- How to manage partially known or unknown ID during submission

Correction information

- Correct the breed code
- Correct the gender
- Correct the country code
- Correct animal ID (ReID)
- Correct/add registered animal name
- Correct one parent (add, change or "blank")
- Correct the birth date
- Switch parentage between two animals (sire and dam)
- Change the preferred ID
- Correct a wrong parent when the correct parent is unknown
- Correct the multi birth code

Deletion information

- Delete a pedigree
- Delete a record with no pedigree information:
- Delete a cross-reference
- Delete a Constructed Dam (and prevent it from being re-created)

General information

What to do in case many fields in animal pedigree are incorrect

- **Example cause:** Pedigree information is wrong in more than 2 fields for one individual. The record may have the wrong animal ID.
- **Correction:** Too many changes in a single [Format 1](#) record will not be accepted to guard against the record having the wrong animal ID. If more than 2 changes in pedigree are required for a single individual, please submit multiple records for the same individual, each containing not more than two record changes. Although CDCB accepts more than two pedigree changes contemporarily, the algorithm that checks the integrity of the data may exclude the record if too many inconsistencies are reported. A correction code may be required for some change to be accepted.

Correct/add registered animal name

- **Correction:** Create a [Format 1](#) record, following these instructions:
 - The `new_name` must be inserted in the name of animal field (@100-129)
 - Set record type code (@88) to P
- **Removal:** Create a [Format 1](#) record, following these instructions:
 - Set record type code (@88) to P
 - Set pedigree verification code (@89) to 2
 - Blank the animal name field (@100-129)

Correct one parent (add, change or "blank")

- **Correction:** Create a [Format 1](#) record, following these instructions
 - set sire/dam ID to correct sire/dam ID
 - set pedigree verification code (@89) to 2 (For adding only; verification code is not required)/ set pedigree verification code (@89) to 3 for constructed dam ID
 - Confirmed parents (i.e. using genomic information) cannot be modified. Please submit a request explaining the situation to CDCB customer service.

Correct the birth date

- **Correction:** Create a [Format 1](#) record, following these instructions
 - set birth to **correct birth**
 - set pedigree verification code (@89) to 2
 - If the change is over 5 years multiple records will be needed so each record changes the birth date by less than 5 years. Only a breed source record can change a breed source pedigree. If the existing record is for an animal with lactations or progeny and the input record is not breed source, the birth date change can not be more than 90 days (400 days with verification). If the existing birth date is estimated and the input record is not breed source, the maximum change is 21 mo (638 days).

Switch parentage between two animals (sire and dam)

- **Correction:** Create and submit three (3) [Format 1](#) records, following these instructions in the exact order
 1. create a pedigree correction record for animal #1 with the correct Sire ID and the Dam ID set to blanks, set record type code (@88) to P and verification code (@89) to 1
 2. create a pedigree correction record for animal #2 with the correct Sire and Dam IDs, set record type code (@88) to P and verification code (@89) to 1
 3. create a pedigree correction record for animal #1 with the correct Dam ID, set record type code (@88) to P and verification code (@89) to 1

Change the preferred ID

- **Correction:** Create and submit [Format 1](#) records, following these instructions.
 - **Cows**
 - set animal ID (@3) to preferred ID
 - if the correct preferred ID is NOT in the database, set cross reference ID (@54) to previously preferred ID
